/clone library generated from [Stalk Bark from adult cDNA library generated from [Stalk Bark from adult cDNA library generated from polyA+ mRNA using plants] cDNA was prepared from polyA+ mRNA using SuperScript Plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose double-strand cDNAs were fractionated in a sepharose class double-strand cDNAs was fragments sizing between 0.8 mid class become of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGCTATTAAAAGGAAGGCTGAGAAAATGCAAAAATGAAAGGTGAGATGAAGGAAAAAA 1012

/note="Vector: pCMV.SPORT6; Crown and developmental stages of spike formation in wheat cultivar Norstar. 4 mRNA populations were combined before constructing the library. The first mRNA population is from lcm crown sections after 30 days of cold acclimation. The second is from lcm crown sections after the third instant was a deacclimation (before deacclimation plants were fully vernalized for 49 days). The third is from different developmental stages of spike formation (5 to 50mm) that still have not emerged from the developmental stages of spike and seed formation after having emerged from the leaf (visible). First strand synthesis in this library was done in the presence of methylated dGTP thereby protecting from internal cleavage with NotI."
